

ASSESSMENT EXERCISE

Multiple Choice Questions

1. Which AI program defeated the world chess champion, Gary Kasparov, in a highly-publicized match?

(a) Deep Blue

(b) Watson

(c) Kismet

(d) ELIZA

2. Which AI-driven technology aims to simulate human-like conversation?

(a) Machine Learning (ML)

(b) Robotics

(c) Virtual Reality (VR)

(d) Chatbots

3. Which of the following is an application of AI used to process and understand human languages?

(a) Predictive Analytics

(b) Autonomous Vehicles

(c) Natural Language Processing (NLP)

(d) Facial Recognition

4. What type of AI is designed to perform a specific task or solve a specific problem?

(a) Artificial Narrow Intelligence (ANI)

(b) Artificial General Intelligence (AGI)

(c) Artificial Superintelligence (ASI)

(d) Artificial Consciousness Intelligence (ACI)

Very Short Answer Type Questions

5. What do you understand by Humanoid Robots?

Ans: Humanoid robots are robots designed to look and behave like human beings. They may have a human-like body, head, arms, and legs and can perform certain human activities.

6. Write the Full form of NLU.

Ans: Natural Language Understanding

7. Name any two virtual voice assistants.

Ans: Two virtual voice assistants are:

1. Siri
2. Google Assistant

Short Answer Type Questions

8. What are three domain of AI?

Ans: The three main domains of Artificial Intelligence are:

1. Data (Data Science) – It deals with collecting and analysing data to find useful information.
2. Computer Vision (CV) – It enables computers to understand and interpret images and videos.
3. Natural Language Processing (NLP) – It enables machines to understand and communicate using human language.

9. Define Computer Vision (CV).

Ans: Computer Vision is a field of Artificial Intelligence that enables computers and machines to understand and interpret visual information such as images and videos.

Example: Facial recognition and self-driving cars use Computer Vision.

10. What potential risks are associated with our data being used for facial recognition purposes?

Ans: Some potential risks of facial recognition are:

- It may affect a person's privacy.
- Personal data can be misused or stolen.
- Incorrect identification can lead to wrong decisions.
- People may be tracked or monitored without their permission.

Long Answer Type Questions

11. How can Natural Language Processing be applied in evaluating subjective assessments in schools?

Ans: Natural Language Processing (NLP) can help in evaluating subjective answers written by students. AI systems can read and analyse written responses and compare them with expected answers.

NLP can be used to:

- Check grammar and spelling mistakes.
- Identify important keywords and concepts.
- Analyse the meaning of an answer.
- Provide quick feedback to students.
- Help teachers save time in checking large numbers of answer sheets.

12. What are the major future goals of Artificial Intelligence?

Ans: The major future goals of Artificial Intelligence are to develop intelligent machines that can perform tasks efficiently and help humans in different areas.

Some important goals are:

- To create machines that can learn and improve from experience.
- To make computers understand human language better.
- To develop intelligent robots that can assist humans.
- To solve complex problems quickly and accurately.
- To improve fields such as healthcare, education, transportation, and agriculture.
- To develop AI systems that are safe, fair, and useful for society.

13. What advantages come from using an AI system?

Ans: Artificial Intelligence provides many advantages in our daily lives and different industries.

Some advantages are:

1. **Reduces human effort:** AI can perform repetitive tasks automatically.
2. **Works faster:** AI systems can process large amounts of data quickly.
3. **High accuracy:** AI can reduce human errors in many tasks.
4. **24×7 availability:** AI systems can work continuously without getting tired.
5. **Better decision-making:** AI can analyse data and help in making better decisions.
6. **Useful in many fields:** AI is used in healthcare, education, banking, transportation, and many other areas.
